

GARMENT CARE AND WASHING INSTRUCTIONS

Care instruction labels which specify washing and drying instructions are located on the inside of all sportswear supplied by Sports & Leisure Brands. Please follow these instructions carefully to ensure a longer life span.

In addition to the instructions in the garment we recommend the following for sublimated garments and those with additional heat transfers and screen prints:

- If you use a Commercial laundry ensure they are adhering to all wash instructions.
- Please do not wash any of our garments above 40c with a short spin cycle.
- Wash the garment inside out.
- Do not wring.
- Wash on a synthetic programme setting.
- Do not tumble dry.
- Do not place your garments on a radiator to dry.
- Do not dry clean.
- Do not iron heat transfers and screen prints and do not place directly on to radiators.
- Do not bleach.
- Do not store wet either after use or after washing. Sublimated garments should be washed as soon after use as possible to limit the chances of staining and print migration.
- Do not wash with or apply friction to when wearing the garment with abrasive fabrics including but not exclusively nylons, plastics and Velcro.
- Do not use bicarbonate of soda (baking soda), or similar products, when washing or as a muscle preparation.
